

Choose and locate a scientific article from scholar.google.com that catches your interest.

<http://scholar.google.com>

Let me know if you have problems accessing it from the library. Read the article critically, and answer the following:

What questions do you think this article will answer? (From title and abstract only)

What do the authors conclude?

Why did the authors do this study?

What data/results emerged from the study?

How did the authors do this study?

What is the significance of their findings for your work (poor, medium, high)?

How does this article relate to material you've covered before?

Did this article answer the questions, and why?

What would you read next on this topic?

Identify what is useful in the paper:

- example for writing a lit review?
- Interesting methods to explore the topic?
- Useful results?
- Interesting analysis?
- All of the above
